Lightweight with 15mm Wide Serrated Seal Line

Introducing our **KF-Series Portable Direct Heat Sealers** – lightweight sealers that can be used anywhere; ideal for sealing small, irregular or extra long packages. With a temperature controller and the ability to seal thicker materials like cellophane, coated aluminum foil, and Kraft paper, the KF-200CS and KF-300CS sealers are built to make your life easier.

Equipped with an adjustable temperature controller, the KF-Series direct heat sealers allows the user to control the amount of heat needed for different material types. Simply insert the material between the jaws, close for a few seconds, and then release for a perfect seal every time. A 5-15 minute warm up time is required to achieve the correct temperature.

Made of durable metal with insulated rubber hand grips, this sealer is designed to last. Also included with each sealer is a stand for setting your sealer while not in use. Do not touch the jaws of the sealer until it has cooled down.

The adjustable temperature controller allows you to customize the heat needed for different materials, ensuring consistent and reliable sealing. Don't wait to streamline your packaging process - choose our KF-Series direct heat sealers and experience hassle-free sealing today!

SPECIFICATIONS	KF-200CS	KF-300CS
